4. INSTALLATION PREPARATION

The following guide will help prepare the area before the installation of the Kommander in-dash display kit. These instructions are based on a common example of a Ford F-150 2018.

- The basic installation of components in the roof console kit should require approximately 1 hours of labor time.
- For cold climates, the interior cabin panels and trims are stiff and prone to breaking when cold. Allow the vehicle interior compartment and cabin to reach room temperature before removing plastic trims and components.
- Keep screws removed during installation because they will be re-used.
- This installation is permanent, and it will not be possible to reinstall the vehicle at its original state. It is not necessary to keep removed part and they can be disposed.
- The mounting bracket is designed to accommodate different configurations of F-150 OEM roof console models. Some parts may not be required depending on the vehicle configuration.

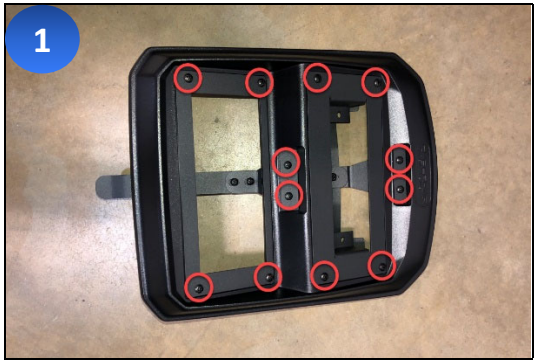
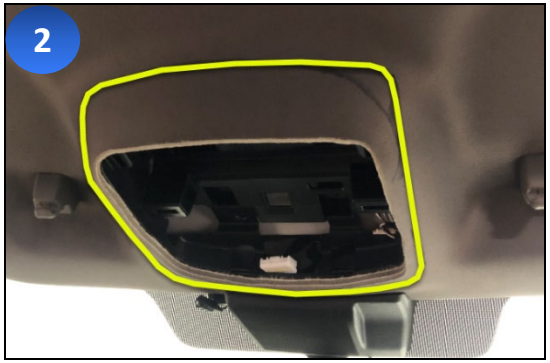
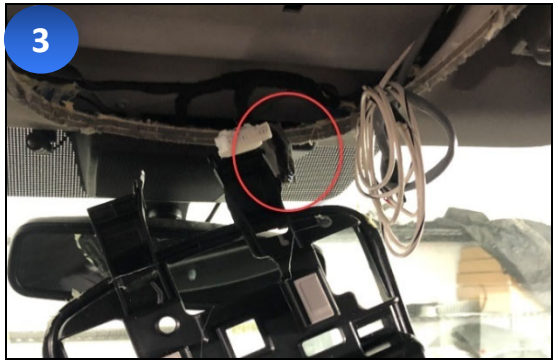
5. ROOF PREPARATION



Remove these 12 screws to separate the metal mounting parts and the plastic console.



Cut the roof foam by following the yellow line. Precision is not so important as the new console will cover it. Remove internal plastic frame holding the original console. Take care to localize wires inside the roof to prevent cutting them.



Unclip the connector from the plastic frame to remove it.

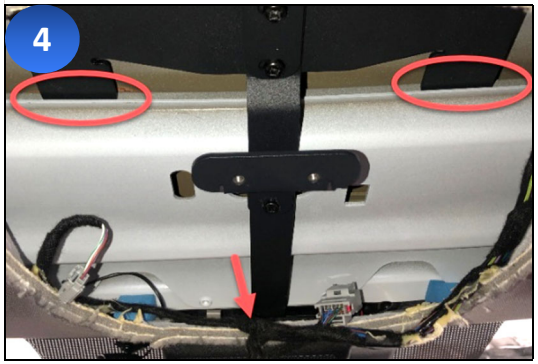
6. ROOF CONSOLE INSTALLATION



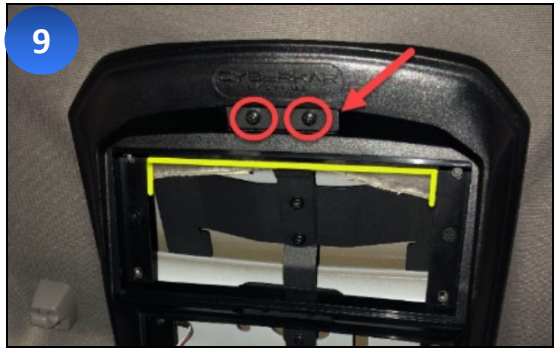
Insert metal mounting bracket tip **(part #4)** between metal and plastic pointed with the arrow to help holding the bracket during installation. Insert the 2 circled flaps behind the metal channel.

Change the screw with the bracket lock screw **(part #9).** It will lock the bracket to prevent it from falling.

Install the clip **(part # 12)** to secure the assembly as shown in the photo. Cut off the excess.

Put the roof console plastic shell **(part #1)** and insert the front rectangular mounting washers **(part #5).** Fix the roof console plastic shell **(part #1)** using front screws **(part #7).**

Punch holes using a sharp tool.



Fix the back of the console using rear rectangular mounting washer **(part #6)** and rear screws **(part #8).** Cut the remaining foam coming out of the mounting space following yellow line, using the plastic as a guide.

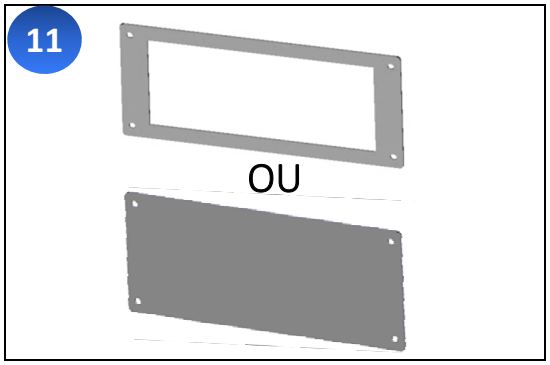
Stick industrial velcro **(part #10)** cut in 3-inch length on the plastic side of the console. Stick other velcro strip on the bracket you want to install in the console and stick the equipment in place.



Secure the equipment by installing provided equipment mounting frame **(part #2)** or custom full plate (sold separately) using equipment mounting screws **(part #8).** If a spot is unused, replace the mounting frame with provided blank filler plate **(part #3).**

Inspect the console to ensure it is firmly fixed.
